## **DETAILED ACTION**

Examiner acknowledges the amendment and response filed April 25, 2008.

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-32 are rejected under 35 U.S.C. 101 because the claimed invention is not supported by a concrete result.

The claims lack a practical application because a useful, *concrete*, and tangible result is not produced. The claims do not produce a concrete result because they are not *substantially* <u>repeatable</u>. As stated in the previous office action as an example:

The claims assert an emotion induction protocol is capable of inducing a desired emotion, however an individual user of the device has their own subjective responses to any given stimuli, and individuals respond differently to the same stimuli. For example, using lavender as a stimulus maybe used to relax one user, but another user maybe allergic to the stimulus and not create the desired effect to relax a user. Additionally, a lavender scent maybe used to relax an individual on one day yet that same stimulus may not work in the same fashion if that same user has a cold an is unable to use their sense of smell in the same or similar manner.

Claims 1-32 are also rejected under 35 U.S.C. 112, first paragraph. Specifically, since the claimed invention is not supported by either a specific and substantial asserted utility, a credible asserted utility or a well established utility for the reasons set forth above, one skilled in the art clearly would not know how to use the claimed invention.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

Art Unit: 3736

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In regards to claim 1, it is unclear the examiner what structure the "emotion induction module," "biostimulation module," and "biosignal measurement module" requires. It is unclear to the examiner if the modules are software or algorithms, or if the modules require structure. If the modules are software or algorithms the examiner suggests the applicant recite that the modules are on a computer readable medium, microprocessor, memory, or the like. The examiner cautions the applicant not to add subject matter to the claims that is not supported by the specification.

## Response to Arguments

Applicant's arguments filed April 25, 2008 have been fully considered but they are not persuasive.

Applicant asserts that the claims are not rejectable under 35 U.S.C. 101, or 112.1 or, 112.2. The Examiner disagrees with the Applicant and relies on previous rejections and arguments. *Cited below in single space format*.

Applicant pointed out the guidelines for patent eligibility in the MPEP §2106 on pages 12 and 13 of the response. And as the Applicant correctly pointed outs on page 14, lines 4-9, it is the examiner's belief that the claimed invention falls within the judicial exception; meaning a physical transformation must be produced, or a practical application must produce a "useful, concrete, and tangible result." The former does not apply and the latter standard is in question. Furthermore, the Applicant points accurately to the standard for the latter standard which requires a "useful, concrete, and tangible result," see the last paragraph of page 13 of the response.

In the previous office action the examiner did not accurately provide the rationale for the rejection, a "specific and substantial asserted utility, a credible asserted utility or a well

Art Unit: 3736

established utility." However examiner did provide a proper analysis under the "concrete prong of the test." As such the rejection under 35 U.S.C. 101 has been re-worded. As the Applicant has pointed out "[a] 'concrete' result is a result that can be substantially repeated," see page 13 of the response, lines 20-21.

Although, applicant did a through analysis on the previous office action based on an unclear 101 rejection, the applicant did not answer the question of whether a concrete result exists because it is repeatable. In fact, the Applicant states on page 16 in response to the previous office action's example that, "the user's allergic reaction *would likely be* reflected . . . which in turn *would likely* deviate . . ." (emphasis added). The Applicant chosen words reflect the examiner's point that the claimed invention is not concrete because it is not substantially repeatable. The phrase "would likely" connotes that the claimed invention may or may not work properly as claimed and as such is not substantially repeatable.

The Applicant further argues on page 17, "[w]hether the user feels that the desired emotion has been induced need not be considered" however with respect to claim 15, the claim states "inducing the emotion" in the last limitation of the claim (see page 7 of the claims section). Additionally, "inducing the emotion" refers to the inducing a desire emotion claim 15, line 5, (see page 6 of the claims section.) Claim 1 suffers from the same issue, the claim states in line 7, an emotion induction module . . . configured to induce a desired emotion. It is the Examiner's position that if Applicant claims a desired emotion is to be induced, that Applicant is able to produce a substantially repeatable induced desired emotion. It is the examiner's position that "would likely" is not sufficient to be substantially repeatable.

Additionally, Applicant comments on pages 13-17 that the 101 rejection be withdrawn. However, the Applicant has not made a clear argument or provided any evidence as to how the claimed invention is *substantially repeatable*. As such the rejection will not be withdrawn. For the same rationale the rejection under 35 U.S.C. 112 is not withdrawn.

As for the 112.2 rejection, a "unit" is not a clear indication of structure. A "module" or "unit" may be a combination of hardware and software, but it is unclear to the examiner when "unit" applies to hardware or software. Although claim 3 uses the term unit to arguably impart structure, for example "storage unit" or "control unit", for the emotion induction module, that does not necessarily require the biostimulation module or the biosignal measurement module to have structure instead of being software.

## Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael C. Astorino whose telephone number is 571-272-4723. The examiner can normally be reached on Monday-Friday, 8:30AM to 3:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Max Hindenburg can be reached on 571-272-4726. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
